

Midterm Evaluation – KEMM21

Course coordinator: Prof. Kenneth Wärnmark

Course representatives: Isabell Mitrovic (secretary) & Simon Edin

Comments from students:

Some of the student feel that they do not have time to revise the material due to the high workload.

The students want to have access to all of the references (experiment) at the start of the course.

The exercise sessions are highly appreciated by the students, as they practice solving problems.

Discrepancy between the mechanisms presented in the lectures and the mechanisms that the lab assistants expect from the student to do in the reports.

Comments from course responsible:

In order to prevent stress at the end of the course, the teacher encourages the students to revise the material continuously.

Depending on the skills of the students some will finish earlier and some later. The ones that finish earlier, gets more time to study the theory part of the course.

Talk with the lab assistants, about providing all of the references at the start of the course.

The students have been good at doing the exercises.
