Sammanställning för "Molekulär kvantmekanik" (KEMM58) VT 2020

Kursansvarig: Valera Veryazov

Övriga lärare: Joel Creutzberg, Ernst D. Larsson

Antal studenter: 1 registrerade studenter

Betyg: 1 st G

Utvärdering

I. Sammanfattning av kursvärderingen

Totalt antal svar: 1

Kort sammanfattning av resultatet:

Comments are mostly positive for all components (lectures, seminars, labs): explanations are sufficient and the time given for all components is the right one.

From the negative sign it was mentioned that the lectures are indeed needed, since the course materials are not sufficient without explanation.

Some complains are related to the classroom (due to the small group, the lectures and seminars were held at Theoretical Chemistry library) and to the problems with usage of software at Aurum computer class.

II. Lärarlagets kommentarer

Teachers agree with the evaluation. There is, of course, a point in a demand that all slides and materials should be sufficient, but it is very difficult to exclude completely the teacher in the class.

With a new demand for remote education some materials should be revised. For the environment questions – Chemical center should consider an investment into modern classrooms with a projector and modern teaching boards.

For the computer class, the software used in the course has been developed for Linux operating system. It works under Windows 10, but with bugs. Chemical center should consider a possibility to have one class running with Linux.

III. Utvärdering av förändringar sedan förra kursen

We constantly improving the slides and other materials, as it was suggested previously, but the process is the on going development. As it was suggested earlier, one extra lab has been introduced to support the study of group theory.

IV. Förslag till förändringar till nästa kurs

Exercises, especially for the last part of the course will be revised and improved. We will also work on the improvement of the lecture notes and prepare the course for a distant education. We also plan to introduced a suggested list for the projects.

2020-03-24, sammanställning är gjord av: Valera Veryazov, Joel Creitzberg, Ernst D. Larsson, Axl Eriksson
