

Course Evaluation – KEMM21

Course coordinator: Prof. Kenneth Wärnmark

Course representatives: Isabell Mitrovic & Simon Edin (secretary)

4/8 handed in course evaluations.

3/6 G and 2/6 VG after first re-exam

Pericyclic reactions, Physical chemistry:

The result of course evaluation is as expected with it being very relevant and the book being a bit unclear on the subject. -KW

Organic chemistry:

Results are as expected with it being a bit more popular than physical -KW

Exercises:

Extremely good and relevant -IM

The participation level was a bit low making them a bit less relevant. -KW

Quizzes:

Maybe move them to the next opportunity (lecture) – course evaluation

Yes this is how it is normally done. – KW

They are good and useful. -IM

Lab course:

Extremely good with a bit too much time spent on reports. -course evaluation

As lab reports in earlier courses are lacking in quality, writing a quality report must be taught. – KW

IM agrees

To help students with stress over hand ins, the maximum amount of hand ins will be increased to 4. Also, the possibility of moving the final deadline later in the course will be investigated to see if it is allowed legally. -KW

Another measure to potentially reduce stress is adding another midterm deadline after the last lab. -KW

On the comment about not all reactions giving product: it will be investigated if they all work or if they can be replaced. -KW

Getting access to literature at the start of the course would be helpful to better plan when to write risk assessments and not being forced to do it the night before. -SE
Kenneth agrees and will investigate making it possible.

Atmosphere in the course:

Was only okey which was surprising. -KW/SE/IM
This is potentially due to it being online. -SE

General comments:

Is it possible to add an index of the lecture notes? They are a bit messy. – course evaluation
Making an index would be too time consuming and the lecture notes are lecture notes and just that. If anyone is looking for a specific reaction and having a hard time with the lecture notes use the book. -KW

Is it possible to get a summary of the most important reactions? -Course evaluation
It is not possible again due to the amount of time required, but listening to where the emphasis is during exercises and lectures can give a good clue of what is important. -KW

Moving the exam as late as possible during the course. -course evaluation
The exam was on the last day of the first half of the spring term. -KW

The amount of course evaluations handed in might increase if the course evaluation could be handed in after the exam. -IM
Yes, but at least a day after the exam as a bad exam should not influence the result of the course evaluation. -KW

Suggestions of a digital course evaluation was brought forward by course representatives, however, it is not possible for Kenneth to fix as time spent on the course is already very high.
